

## Klober PV Solar Outlet for 1200 new homes

Klober's Solar-Line Solar Outlet is being used as part of the installation of photovoltaic panels on 1200 new homes being built by Alliance Homes. The housing association is placing heavy emphasis on renewables to help meet carbon reduction targets and the Solar Outlet creates the all-important watertight and airtight seal around cables as they pass through the roof. The Solar Outlet's 8 cable insert allows additional cables to be retrofitted if necessary while enabling services to be accessed with ease
